Last update December 2023

Experience

Vocces Lab Feb 2023 - Current

Web Developer (Remote)

I have been part of the Articketing project developing functions and improvements of the point of sale system which handles the sale of tickets to monuments, museums and historical sites.

I work developing both the frontend and the backend part of the point of sale that uses local database and synchronizes information to the online server. Some of the most interesting implementations I have worked on have been:

- Automated updates for new versions of the POS.
- Implementation of concert and theater tickets module by numerical selection of seats and location types.
- Integration of store item sales with inventory and vendor order management.

Palace Resorts Aug 2022 - Nov 2022 (4 months)

Front End Developer (Remote)

I was part of the development of a new system called GlobalSales that unified different sales channels and offers customers the ability to manage their own reservation packages. I was as Frontend developer from the beginning of the project until its delivery to production. I learned to use SOLID principles as well as Clean Architecture for the integration with the Serverless Backend. Always working hand in hand with the Back and QA team.

Applab.mx Sep 2021 - Jan 2022 (4 months)

Front End Web Developer (Remote)

I worked on websites for businesses and clients looking for a more customized design. I also worked on a project in production for a German company called Bits&Birds in which we developed a large platform for the management of vacancies and candidates, working continuously hand in hand with the development team of that company.

Freelance 2020 - 2021 (2 Years)
